**SILCA's innovation: Combustion chamber board SILCAPAN 750FB
at the Progetto Fuoco from February 19th to 22nd, 2020 at Verona**

Dear Sir or Madam,

SILCA GmbH will present itself to you again at the coming Progetto Fuoco from February 19th to 22nd, 2020 at Verona/Italy.

Alongside the yet established calcium silicate boards SILCA 250KM and SILCAHEAT 600C we will introduce you our new combustion chamber board "SILCAPAN 750FB" for the use directly in the combustion chamber of stoves, pellet stoves, heating inserts and fireplaces for different solid fuels.

SILCAPAN 750FB offers a high compressive and flexural strength as well as a high hardness combined with good insulation properties. Hereby and through its bright, reflecting surface the combustion chamber board enables a fast achievement of the steady-state temperature in the combustion chamber of the fireplace. SILCAPAN 750FB is moisture resistant and our modern five-axis CNC machines process SILCAPAN 750FB according to your requirements.

We are looking forward to welcome you at our stand B12 in hall 5 at Verona or please feel free to contact us for further information about our products.

Kind regards

**SILCA Service- und Vertriebsgesellschaft
für Dämmstoffe mbH**
